

Low level of treatment access

$$P(\text{Quintuple}) = \frac{(9.9 + 62.7)}{(9.9 + 6.1 + 2 \times 62.7)} = 51.3\%$$

High level of treatment access

$$P(\text{Quintuple}) = \frac{(9.7 + 54.9)}{(9.7 + 5.9 + 2 \times 54.9)} = 51.5\%$$
